FAUCET WATER FILTER

with ACTIVATED CARBON FROM
COCONUT, MAGNETS, ZEOLITE AND
SILVER FILAMENTS

HEALTH
IS

BEAUTY

2

Water (H2o)

It is a treasure without a person cannot sustain for more than 72 hours. As a source of life and health, water is a resource whose vital importance and potential is perceived by an increasing number of countries in the World. In this regard, the ecologically developed countries are making a great efforts, human and economic resources, for forming and implementing long-term strategies for the preservation (and enlargement) of

3

water reserves, as well as of improving the quality of drinking water.By introducing water into the body, its cells are supplied with the necessary nutrients (vitamins, minerals, salts) and the harmful ingredients are ejected. Water also participates in themoregulatory and breathing processes. Science shows us that for the normal operation of the organism, one must enter at least 1.5 liters of water per day.Experts recommend that we drink 2 liters of water every day. But is the quantity sufficient for health and beauty? Ask yourself about the quality of the water you drink! The two most common forms of drinking water in our country are tap water and bottled water. A large number of people use tap water (from faucet). However, the problem associated with the so-called tap water is,

4

that such water is hard-it contains a lot of chlorine. Further, microorganisms, organic impurities, heavy metals and other substances harmful to humans may also occur in the tap water. An alternative to the so-called tap water is bottled water. It became trend in recent years,which is shown through the large number of domestic andforeign bottled water producers, in the manner that statistical data clearly show that 40% of the world's population is buying bottled water. Even assuming that bottled water is of higher quality than tap water , one should take into account the following :
1) there is a real danger for consumers of inadequate preserving and storing of bottled water in retail shops where water in pet packaging is exposed to high temperature and sun rays remain in storages for several months.

5

2) buying water in big bottles of 6-bottle packs, you are carrying loads that can cause health problems to you, burdening your spine.
3) The purchased water, due to its size, occupies a precious space in your home and ultimately the same plastics, despite your intentions, is completed at the landfill or in the natural environment. It is little known that plastic packaging is consumed so much so that it can be made from the ring around entire planets.
4) A significant amount of consumer basket of an average family goes to the purchase of bottled water. We take that on average every person consumes 1.5-2l of water during the day. We further assume that the average family has 4 members. This means that a daily average family spends between 6l and 8l of water. Multiply it with the prices of bottled d water and you will get how much money an average family spends on bottled water per day.

6

Instead of spending money every day under the influence of advertisements, going out of home several times a day and waiting in line in order to drink "good water" instead of worrying if bottled water was stored in adequate manner and if plastic packing is disposed of in such manner, you can drink mineral water without spending time and money, without worrying about probity of water and endangerment of environment.

7

How?

HOW TO GET WATER IN WHICH NO HLORA, METAL, RARE, STOCKS AND OTHER COMPONENTS HARMFUL BY ORGANISM? HOW DOORS TO WATER IN WHICH MINERALS ARE IN IDEAL RELATIONS, NOT TO BE BOTTLED WATER?

It's enough to extract some money by purchasing the ORION AQUA filtration system, refilling the filter to your tap, and bad "TAP WATER" will become your favorite mineral water.

What exactly is it about?

8

it's about a product of superior quality that, with its appearance and characteristics, is a real jewel. This is a strictly scientific method designed, manufactured and tested filtration system with its elegant design, perfectly connected to the casing, creating the impression of a (unique) whole. The brittle selection of materials and the specific construction of the filter, the fruit of the dedication of renowned scientists, make the ORION AQUA water filter from the tank an ideal solution for clean and healthy water in your home, cottages, offices, etc.

9

Some of the functions of the ORION AQUA filter are

- Purifies water from chlorine and heavy metals
- Destroys microbes, microorganisms and impurities
- Removes organic dirt
- Relaxes the natural water purification
- Removes unpleasant smells, tastes and colors
- The right ideal balance between magnesium and calcium

which:

- contributes to the health of the vascular and nervous system
- Provides strong bones and teeth

ORION AQUA filter is composed of 6 layers of different filtration purposes, with the implemented gold foil and silver grid, carefully combined in order to achieve the desired effect. Among the three layers of microbiological fibers, there is a layer of activated carbon for coconut and zeolite. Like two neodymium magnets.

10

Microbiological fabric

Removes microorganisms and water turbidity

Microbiological fabric (membrane filter) for water filtration that have permeability from 0.02 µm to 30.00 µm serve to prevent passing-through of microorganisms (which are in addition eliminated by the action of a silver grid) and bigger particles, impurities, present in inlet water. . Also, at the exit of the filter, the fabric prevents the passage of activated coal particles from the coconut bark and the zeolite, thereby leaving the filtering materials and blotting of purified water.

11

Activated carbon from coconut husk

removes chlorine, heavy metals and organic impurities from water

Activated carbon is produced from coconut husk . The latest steam activation technology creates pores and fissures which size ranges from 30-150 angstrom which provides absorbing surface in excess of 1000 square metres. It will reliably remove heavy metals, 97% chlorine and 99% pharmaceutical products in traces. It is specially made to remove organic impurities from water and revive its natural purity. Its application includes treatment of water for the purpose of elimination of taste, odour and colour

12

Neodim magnets

consuming magnetic water you become more vital and long-living

Human body is a complex system in which thousands of physical and biochemical reactions are performed. Water treated with magnets becomes active, diffuses through membrane walls more easily thus increasing cell metabolism even several hundred times which gives good results in skin rejuvenation. Magnet softening of water normalizes its structure, increases its ability to dissolve toxins in organism. Magnets stimulate cell metabolism, balance bioenergy fields providing toorgans more efficient functioning and healthy life.

13

Zeolite

Attracts, binds and neutralizes toxic matters and compounds

ORION AQUA filter is a mineral-ceramic type filter based on naturally granulated zeolite. Zeolite is alum inosilicate mineral which has micro-porous structure. There are 194 frameworks of zeolite. ORION AQUA filter contains zeolite obtained by a special thermal activation with more than 75% clinoptilolite, particle size 0.8 / 0.3 mm.
Zeolites have crystal grid-like structure in form of a tetrahedron, which represent a molecular

14

sieve for cation exchange. Crystals of zeolite form a whole maze of channels and pores of a different profile, which depends on the type of zeolite. Zeolite clinoptilolite has a negative cellular discharge from 160 hours. Unique properties are deposited in it, such as the capacity of the cation exchange. This is the ability of zeolites to attract the porous molecular structure as a magnet and absorb, exchange positively charged cations and negative anions. In this way, selectively absorbs specific molecules, performs exchange of own cations for other ionizes based on ionic selectivity.

A small amount of properly activated zeolite has a tremendous effect. The disadvantage of certain minerals in the body can have a bad effect on human health. But organism should not be burdened

15

minerals because their excessive presence also has adverse effect to health. Like it is necessary to find balance in life, the same is with water that we consume: balanced ratio of components is much more important than their individual quantity.

16

"Cal - Mag Technology"

Provides an optimum ratio of calcium and magnesium in water

Calcium is like a magnesium, an important Microelement that ensures the normal functioningof the body, but only if they have a ratio of 2: 1. and

17

that the sum does not exceed 150 mg / l.

If one of these double miners is present at a higher concentration, it prevents the absorption of the other and it comes to their precipitation in the body. Calcium is essential for solid bones and teeth, and it acts on the nervous system, while the magnesium element is necessary for the proper functioning of the human organism, especially for the cardiovascular system. Preferably, the level of magnesium in the drinking water is at least 30 mg / l. For use in the ORION AQUA filtration system, zeolites are specifically modified to provide the optimal composition of mineral water that passes through the filter.

18

SILVER

destroys the (remaining) microbe a microorganisms into the water

Silver is a metal that is completely non-toxic to the human body. Sticking to microbes and harmful microorganisms has been demonstrated in contact with silver. By leaking water through the silver grille of the ORION AQUA filter, the water remains free from microbes and harmful microorganisms. his construction creates the antimicrobial effect of the filter, i.e. it prevents the development and reproduction of the microbe.

19

GOLD

24 - Carat quality

ORION AQUA filters use at the end of the filtration water tract a sheet of pure twenty-four-carat gold. Why do our filters contain twenty-four-fold gold? It is known that throughout history, gold is considered a symbol of luxury and beauty. In ancient Egypt, during the reign of Cleopatra, pure gold is used to preserve the youthful look of the face. Cleopatra alone is believed to be for this purpose

20

with golden mark on face. Ancient Romans used gold leaves for treatment of various skin diseases. Ancient Chinese regarded the gold as the essence of youth. Considering a long history of the meaning of gold, taking into account that out motto is "Live to be a hundred years old", to the said question we reply: twenty-four carat gold is the mark of ORION AQUA quality and supremacy over other filtration systems.

*Leafs of gold are, according to EU regulations, approved for food, in particular as food additive E175 and, therefore, they are not considered harmfulwithor for humans or broader eco-system.

21

SAVE THE NATURE

bearing in mind that the ORION AQUA filtration capacity is up to 600l of water, the annual use of the ORION AQUA filter is equivalent to a consumption of up to 1600 bottles of 1.5 liters f water.So much the quantity of bottles includes as much as 80 kg of plastic, which often happens, ends in nature (streams, rivers, seas, land) as waste. The problem of plastics is on the one hand, which decomposes slowly, for hundreds of years, and on the other hand, it breaks down on microscopic toxic petrol polymers that enter the food chain through soil and water. Using our filter, you participate in an environmental project, a protection that sees in plastic as one of the most common ecosystems contaminants.

22

Scientifically proven

The product is controlled by the Institute of Public Health of Serbia " Dr Milan Jovanovic Batut"

Abroad, people who are aware of big importance of the optimum ratio of minerals in water for the health of entire organism more and more use water treatment filters which, like ORION AQUA filter, ensure such balance of minerals.

23

INSTRUCTIONS FOR USE

ORION AQUA FILTER

It's an easy-to-use, easy-to-install equipment

Depending on the type of thread on the classic Fountain (internal and external thread), after you remove the sieve, insert the appropriate adapter for your fountain and then place the ORION PLATINUM FILTER on that adapter.

24

After installation of ORION PLATINUM filter, let water run! First water stream will appear in fom of a darker colour sludge – it is in fact a surplus of filtering contents which is NOT harmful l to health. After this first stream, clear mineral water will be running from your tap upgraded with ORION PLATINUM filter.

It is recommended to replace filter cartridge after every 400 - 600 litres of water (for a four-member family, it is approximately a three-month use).

NOTE: When using water for some other purposes (for example, dish washing) we recommend that you take-off the filter from faucet screw thread as in that way you will avoid unnecessary consumption of filter cartridge.

25
